

Katarzyna Moszczyńska

Senior Product Designer | Data-Informed Design, Leadership & AI-Augmented Workflow

Warsaw, Poland · katarzynkamoszczyńska@gmail.com · 504 452 461

— About Me

Senior Product Designer with 8 years of experience designing complex, data-intensive web products for global teams. I build UX processes from the ground up, bring data-informed decision-making into every team I join, and have informally led design on my team for the past 2 years — without the title, but with the full trust of my peers and stakeholders. I work daily with AI tools (Figma Make, Lovable, Claude) as a thinking partner, always starting from my own sketches. I have strong communication skills and settle into any team quickly: across three different teams at my current company, colleagues have consistently told me the same thing — that working with me is great, because I explain ideas clearly, always grounded in mockups or diagrams rather than abstract talk.

Outside work, I climb, hike, and camp — regularly in Poland and Sweden — throw on the pottery wheel, and travel to tea-growing regions around the world.

— Experience

WPP Media | Senior Product Designer / Design Lead

August 2021 – Present · Warsaw (hybrid)

- **Informal design leadership:** for the past 2 years I've informally led design on my team — without a formal title, but as the sole point of contact with our VP of Design in regular 1:1s, and in regular exchange with a design lead from another part of the company. I run design weekly and design review sessions, unblock designers stuck on hard calls, and built a team culture of trust and open feedback.
- **Global-scale design and research:** design for a tool used by client teams across Poland, the UK, Germany, Japan, Brazil, and Australia. I run user research across time zones and regularly present work to global stakeholders and power users in English during sprint reviews.
- **Data-driven decision culture:** initiated company-wide interest in product analytics — a conference outing and follow-up workshops led my team to become the only one in the org tracking product events in Google Analytics. When adoption of a new tool stayed low, I designed an experiment to isolate whether the cause was UX friction or organizational factors (onboarding, enablement); the findings pointed to structural causes, redirecting the team's next steps.
- **AI-augmented design workflow:** work daily with Figma Make, Lovable, and Claude — building dedicated agents fed with research and methodology to pressure-test ideas and speed up analysis, always starting from my own sketches. Final calls always stay mine.
- **Audits and data-informed optimization:** audited and redesigned a campaign-planning application — analyzing page load times together with engineering cut full setup time in half.
- **Support on an LLM-based product:** regular design review and unblocking for the designer building an internal tool where an AI chat translates campaign briefs into ready-made in-app parameters — always in the loop, while leaving her full autonomy.

University of Warsaw | UX/UI Designer

October 2018 – June 2023 · Warsaw

- **WCAG audit and redesign:** full accessibility audit of the USOS mobile app and redesign of elements breaking core WCAG rules.
- **University-wide data system:** full project cycle — workshops, personas, iterative wireframe testing, and after launch, extensive usability testing and a satisfaction survey with a very positive reception.
- **Complex user flows:** instructor rating module, calendar, and per-course grade views for students.

Earlier Experience

- **TAKŁADNIE Design Cooperative — Co-founder & Product Designer, 2019–2026:** co-founded a design cooperative — branding, website, and client branding projects.
- **Warsaw Center for Cultural Education — Educator, 2017–2022:** designed and led Design Thinking workshops for teenagers.
- **Robert Pludra Design Studio — Junior Designer, 2016–2018:** first product design experience, including two weeks of ethnographic fieldwork.

— Key Skills

UX / Product Design: Human-Centered Design Process, Data-Informed Decision Making, Global User Research, UX Audits, Information Architecture, Design Systems

AI-Augmented Design: Figma Make, Lovable, Claude — dedicated research agents, faster analysis, iterative concept testing

Leadership & Process: Informal Design Leadership, Cross-functional Collaboration, Mentoring, Workshop Facilitation, Team Culture Building, Scrum/Agile

Tools: Figma, Google Analytics, JIRA, Confluence, Miro

Languages: English (C1), Polish (native)

— Education

Academy of Fine Arts, Warsaw

BA, Product Design (2015–2019), Grade: 5

Chair, Student Council, Faculty of Design — significantly grew student engagement in faculty life, recognized by faculty staff.

Certified training: Giving Effective Feedback in Design Teams, led by Iga Mościchowska (UX Research).

— Interests

Sport & Outdoor: active lifestyle — climbing, gym, hiking, and camping, regularly in Poland and Sweden

Travel & Tea: visiting tea-growing regions around the world, including São Miguel in the Azores, Japan, China, and Laos

Ceramics: hand-building and wheel-throwing on the pottery wheel
